# DIGI RABBITCORE RCM4100 SERIES

A compact core module ideal for device control for embedded applications that require I/O control, data handling and peripheral connectivity

The RabbitCore RCM4100 series is the entry platform for the Rabbit® 4000 family of core modules. The RCM4100 is designed to mount directly to a user-supplied motherboard and acts as the microprocessor of the embedded system. The microprocessor features 40 GPIO lines shared with up to six CMOS-compatible serial ports, and four levels of alternate pin functions that include variable phase PWM, quadrature decoder, and input capture.
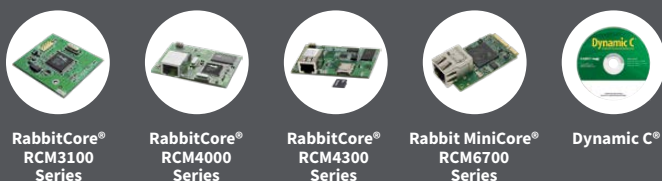

The RCM4100 series, with its robust feature set, ample memory, low-power modes and analog channels, is available for multiple peripheral connectivity options such us as a cellular modem or ZigBee device.

Evaluation of the RCM4100 is easy with the RabbitCore RCM4100 development kit, which provides all the necessary hardware and software to quickly get started.
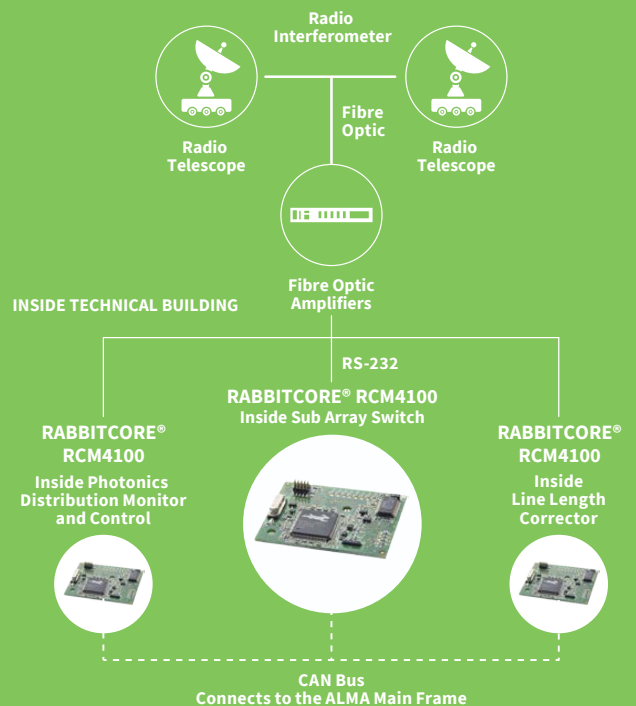

BENEFITS

– Rabbit 4000 running up to 59 MHz
– 512K Flash, 256K / 512K Data SRAM
